"Purification and primary structure of a polypeptide with

multiplication-stimulating activity from rat liver cell cultures.

Homology with human insulin-like growth factor II.";

J. Biol. Chem. 256:6859-6865(1981).

-i- FUNCTION: The insulin-like growth factors possess growth-promoting

activity. In vitro, they are potent mitogens for cultured cells.

IGF-II is influenced by placental lactogen and may play a role in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      PROPEP

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               seq length: 0

Published\_Applications Mucleic Acid and Published\_Applications Amino Acid database searches now generate two sets of results each. The Published\_Applications databases have been split into two parts to reduce the amount of time required for their daily updates. This results in more machine time being available for processing searches.

Newly published applications will appear in the Published\_Applications\_New databases: older published applications make up the Published\_Applications\_New databases.

Searches run against Nucleic Acid Published\_Applications produce two sets of results, with the extensions fundished\_Applications\_NA\_New).

Searches run against Amino Acid Published\_Applications produce two sets of results, with the extensions searches run against Amino Acid Published\_Applications produce two sets of results, with the extensions searches run against Amino Acid Published\_Applications\_AA\_New).

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

## ALIGNMENTS

```
RESULT 1
AAB31482
New mammalian peptide with preptin functionality, useful for preventing or treating Type 2 diabetes mellitus by stimulating insulin secretion.
                                                                                                                  WPI; 2001-112313/12.

```

The present sequence represents a rat preptin peptide. The peptide corresponds to Arg69-Leu102 of the proIGF-II E peptide. Preptin is secreted by pancreatic islet beta-cells which enhances glucose-mediated insulin secretion. Preptin peptides and their analogues are useful in preparing medicaments for preventing or treating a condition which results in or involves deficient insulin synthesis, secretion or action e.g. type II diabetes. Antibodies specific to preptin peptides are useful in an immunological assay such as radioimmunoassay (RIA), IRMA

(undefined) or Enzyme linked immunoabsorbant assay

          The invention relates to a method for treating a disorder mediated by pancreatic islet beta-cells or beta-cell dysfunction by administering preptins (ADM35841-ADM35843), preptin analogues, preptin agonists or salts or derivatives thereof. Preptins are able to stimulate the proliferation and differentiation of beta-cells and fibroblasts. Preptins, preptin analogues, preptin agonists, their salts and derivatives are useful in the treatment of internal or external injuries or wounds (e.g., burns, ulcers, surgical wounds or mucous membrane disruption); conditions characterised by decreased beta-cell mass or number; beta-cell mediated diseases (e.g., type 1 or type 2 diabetes);
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            insulin resistance; insulin secretion disorder; hyperglycaemia; wound; burns; ulcer; mucous membrane disruption; peripheral nervous system injury; Alzheimer's disease; peripheral nervous system injury; Alzheimer's disease; peripheral nervous system injury; Alzheimer's disease; parkinson's disease; actoke; amyocrophic lateral sclerosis; muscular dystrophy; diabetic neuropathy; myocardiopathy; myocarditis; myocardial infarction; cardiac disease; acute renal insufficiency; ischaemia; antidiabetic; vulnerary; antiulcer; antiinflammatory; gastrointestinal; nootropic; neuroprotective; antiparkinsonian; cerebroprotective; muscular; cardiant; nephrotropic; dermatological;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           CC may also be used for treating and/or preventing peripheral nervous system CC injury; Alzheimer's disease; Parkinson's disease; stroke; amyotrophic CC lateral sclerosis; muscular dystrophy; diabetic neuropathy; cardiac CC disease and acute attack; and acute renal insufficiency caused by CC disease and acute attack; and acute renal insufficiency caused by CC disease and acute additionally useful for increasing or maintaining CC proliferation via cell differentiation or neogenesis; for increasing type CC proliferation via cell differentiation or neogenesis; for increasing cell CC death of motor neurons; for increasing muscular end plates; promoting the CC functional recovery of damaged sciatic nerves; preventing peripheral CC motor paralysis during or as a result of chemotherapy, and for improving CC myocardial function. The present sequence represents rat preptin, which CC is specifically claimed for use in the method of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Best Loc

                                                                                                                                                                     The invention relates to gene sequences (ABI99915-ABI99934) having modified expression in fetal heart tissue as compared to adult heart tissue and the encoded proteins (ABB57375-ABB57392). The genes have cardiant activity and may be useful in the promotion of the repair of damage to heart tissue caused by myocardial necrosis. The gene sequences are useful for screening potential compounds for the ability to influence disease associated with myocardial necrosis. Drugs identified by the screening methods may be used to treat and prevent disease with which myocardial necrosis is associated, such as cardiac hypertrophy and cardiac insufficiency. Diagnosis of diseases such as those above is also disclosed. (Updated on 07-AUG-2003 to correct OS field.)

 The invention discloses a composition comprising two or more isolated rat or human polynucleotides or a polynucleotide which represents a fragment, comprising to a rate of the mucleic acid sequence. Also color of the mucleic acid sequence. Also color of the properties of the sequence comprising the vector, a method for identifying a nucleotide sequence which is differentially regulated in an animal subjected to pain and a compound that increases or decreases the expression of the polynucleotide sequence that is differentially expressed in neuronal tissue of a first animal compound which regulates the expression of the polynucleotide sequence the expression of a polynucleotide sequence which is differentially expressed in an animal subjected to pain, a method for identifying an agent compound that regulates the activity of one or more of the composition, a compound that regulates the activity of one or more of the polynucleotides, a method for producing a pharmaceutical composition, a compound useful in treating compound that regulates the activity is useful or small molecule that regulates the composition comprising the one or more composition, a method for identifying a compound useful in treating pain and a pharmaceutical composition comprising the one or more composition composition composition construction construction construction construction construction construction construction construction of the specification, which is differentially expressed during pain. Note: the sequence data for this patent did not form part of the printed construction associated is a rat protein (shown in Table 2 of the specification, but was obtained in electronic form directly from WIPO at the specification, but was obtained in electronic form directly from WIPO at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     뭉

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Best Local Similarity
                                                                                                                                                                                                                 The present sequence represents a mouse preptin peptide. The peptide corresponds to Arg69-Leu102 of the proIGF-II E peptide. Preptin is secreted by pancreatic islet beta-cells which enhances glucose-mediated insulin secretion. Preptin peptides and their analogues are useful in preparing medicaments for preventing or treating a condition which results in or involves deficient insulin synthesis, secretion or action e.g. type II diabetes. Antibodies specific to preptin peptides are useful in an immunological assay such as radioimmunoassay (RIA), IRMA (undefined) or Enzyme linked immunoabsorbant assay (RIA), for quantitatively measuring preptin in a biological fluid preptin peptides are useful for modulating glucose mediated insulin secretion
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Bioactive peptide; preptin; pancreatic islet beta-cell; glucose-mediated insulin secretion; insulin synthesis;

The invention relates to a method for treating a disorder mediated by comparised islet beta-cells or beta-cell dysfunction by administering comparises (ApM35841-ApM35843), preptin analogues, preptin agonists or comparises or derivatives thereof. Preptins are able to stimulate the comparise are useful in the treatment of internal or external injuries or disruption); conditions characterised by decreased beta-cell and fibroblasts. Comparises beta-cell mediated diseases (e.g., type 1 or type 2 diabetes); and conditions characterised by decreased beta-cell mass or comparise beta-cell mediated diseases (e.g., type 1 or type 2 diabetes); and conditions characterised by insulin resistance, undesirably low comparise beta-cell mediated diseases (e.g., type 1 or type 2 diabetes); and solve the reventing peripheral nervous system comparises and acute attack; and acute renal insulin resistance, undesirably low composed for treating and/or preventing peripheral nervous system composed in the preventing peripheral composed in the preventing peripheral composed in the method of the invention. The present sequence represents mouse preptin, which is specifically claimed for use in the method of the invention.
  Parkinson's disease; stroke; amyotrophic lateral sclerosis; muscular dystrophy; diabetic neuropathy; myocardiopathy; myocardiopathy; myocardial infarction; cardiac disease; acute renal insufficiency; ischaemia; antidiabetic; vulnerary; antillcer; antiinflammatory; gastrointestinal; nootropic; neuroprotective; antiparkinsonian; cerebroprotective; muscular; cardiant; nephrotropic; dermatological;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Use of preptins, preptin analogs, preptin agonists, their salts or derivatives, for treating a mediated disease, disorder or condition mediated in whole or in part by beta-cells or beta-cell dysfunction,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           insulin resistance; insulin resistance; insulin secretion disorder; hyperglycaemia; wound; burns; ulcer; mucous membrane disruption; peripheral nervous system injury; Alzheimer's disease;

                                                                                                                                                                                                                                                                                                                                            This invention relates to a novel method for treating a bone condition. Specifically, it refers to increasing or maintaining bone density, stimulating osteoblast growth, or modulating osteoblast apoptosis. The present invention comprises administering preptin, a preptin analogue or agonist thereof, which corresponds to residues Asp-69 to Leu-102 of the proinsulin-like growth factor II that is co-secreted with insulin from pancreatic islet beta cells in response to glucose. Accordingly, such compositions that exhibit osteopathic activities can be used to treat or ameliorate diseases including osteopathic activities can be used to constant of the compositions of the composition of the compo

The invention relates to an isolated nucleic acid comprising at least 10 contiguous nucleotides of any of the 233 polynucleotide sequences given in the specification, or its complement. The nucleic acids encode cancer-associated proteins. Also included are an expression vector comprising the isolated nucleic acid or expression vector, a microarray for detecting crecombinant nucleic acid or expression vector, a microarray for detecting a cancer-associated (CA) nucleic acid comprising at least one probe comprising at least 10 contiguous nucleotides of any of the above-comprising at least 10 contiguous nucleotides of any of the 95 mentioned nucleotide sequences, an isolated polypeptide (encoded within complement), an isolated antibody, (or its antigen binding fragment) that binds to the above polypeptide, a hybridoma that produces the above complement), an isolated antibody, (or its antigen binding fragment) that complement to the above polypeptide, a hybridoma that produces the above complement, an antibody, a pharmaceutical composition comprising the above concolonal antibody, a pharmaceutical composition comprising the above concolonal antibody, a pharmaceutical excipient, a kit for detecting cancer concolonal antibody, a pharmaceutical excipient, a kit for detecting cancer concolonal antibody, and pharmaceutical excipient, a kit for detecting cancer concolonal antibody and a method yet and a methods for diagnosing cancer conditional, a method for delivering a therapeutic agent to cancer cells in an individual, a method for inhibiting growth of cancer cells in an conditional procession of a polypeptide (or their fragments), methods of screening for anticancer activity or for a bioactive agent capable of modulating the activity of a CA protein (CAP), methods for detecting cancer. The present sequence is a mouse CAP protein that modulate cancer that protein and the sequence is a mouse CAP protein that modulate cancer for a concolonal and ort resulting format directly from WIPO at the printed or cancer cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            14-FEB-2003; 2003US-00367094.

                                                                                                                                                                                           The present sequence represents a human preptin peptide. The peptide corresponds to Arg69-Leul02 of the profGF-I E peptide. Preptin is secreted by pancreatic islet beta-cells which enhances glucose-mediated insulin secretion. Preptin peptides and their analogues are useful in preparing medicaments for preventing or treating a condition which results in or involves deficient insulin synthesis, secretion or action e.g. type II diabetes. Antibodies specific to preptin peptides are useful in an immunological assay such as radioimmunoassay (RIA), IRMA (undefined) or Enzyme linked immunoabsorbant assay (ELISA) for quantitatively measuring preptin in a biological fluid preferably in cerebrospinal fluid. Agonists or antagonists of preptin peptides are
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           glucose mediated glucose mediated
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Homo

Use of preptins, preptin analogs, preptin agonists, their salts or derivatives, for treating a mediated disease, disorder or condition mediated in whole or in part by beta-cells or beta-cell dysfunction, ulcers õ inflammation. æ ά

Claim 2; SEQ ID NO 1; 63pp; English.

cc pancreatic islet beta-cells or beta-cell dysfunction by administering cc preptins (ADM35841-ADM35843), preptin analogues, preptin agonists or cc salts or derivatives thereof. Preptins are able to stimulate the cc proliferation and differentiation of beta-cells and fibroblasts. CC Preptins, preptin analogues, preptin adjoints or stimulate the cc disruption; preptin analogues, preptin dayonists, their salts and cc external injuries or wounds (e.g., burns, ulcers, surgical wounds or mucous membrane cc disruption); conditions characterised by decreased beta-cell mass or cc number; beta-cell mediated diseases (e.g., type 1 or type 2 diabetes); and conditions characterised by insulin resistance, undesirably low conditions characterised by insulin resistance, undesirably low insulin secretion, hyperglycaemia or post-prandial hyperglycaemia. They call also be used for treating and/or preventing peripheral nervous system cripiury; Alzheimer's disease; Parkinson's disease; stroke; amyotrophic disease and acute attack; and acute renal insufficiency caused by ischaemia. They are additionally useful for increasing or maintaining beta-cell mass or beta-cell number; for stimulating beta-cell colliferation via cell differentiation or neogenesis; for increasing type call death of motor neurons; for increasing muscular end plates; promoting the functional recovery of damaged sciatic nerves; preventing peripheral is specifically claimed for use in the method of the invention. Which is specifically claimed for use in the method of the invention.

                                                                                                                                                     This invention relates to a novel method for treating a bone condition. Specifically, it refers to increasing or maintaining bone density, stimulating osteoblast growth, or modulating osteoblast apoptosis. The present invention comprises administering preptin, a preptin analogue or agonist thereof, which corresponds to residues Asp-69 to Leu-102 of the proinsulin-like growth factor II that is co-secreted with insulin from pancreatic islet beta cells in response to glucose. Accordingly, such compositions that exhibit osteopathic activities can be used to treat or ameliorate diseases including osteopathic, osteopenia, bone defects or osteogenesis imperfecta, as well as bone loss resulting from primary hyperparathyroidism, endocrine disorders, corticosteroid treatment, autoimmune arthritis or addictive drug use. This peptide sequence is the

                                                                                                                                                                                                                                                                                                                                                                                                                                                          The present invention describes a modified therapeutic peptide (I) CC comprising a therapeutically active amino acid region (III) and a CC reactive group (II) (e.g. succinimidyl and maleimido groups) attached to CC a less therapeutically active amino acid region (IV), which covalently CC bonds with amino/hydroxyl/thiol groups on blood components to form a CC peptidase stabilised therapeutic peptide composed of 3-50 amino acids. CC (I) are useful for modifying therapeutic peptides e.g. hormones, growth CC factors and neurotransmitters, to protect them from peptidase activity in CC vivo for the treatment of various disorders. Endogenous therapeutic CC peptides are not suitable as drug candidates as they require frequent CC administration due to rapid degradation by peptidases in the body. CC Modifying and attaching therapeutic peptides to albumin prevents or CC reduces the action of peptidases to increase length of activity (half CC life) and specificity as bonding to large molecules decreases CC intracellular uptake and interference with physiological processes. CC AAB90829 to AAB92441 represent peptides which can be used in the CC exemplification of the present invention
                                                                                                                                                                                                                                                                                    Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The invention relates to polynucleotide and polypeptide sequences for a novel insulin homolog referred to as Zins3. The polynucleotide sequences encoding the Zins3 polypeptides are located on chromosome 12. The present invention also includes antibodies to the Zins3 polypeptides. The Zins3 polypucleotide and polypeptide sequences of the invention are useful for identifying and isolating receptors involved in growth and differentiation of Zins3 responsive cells. This sequence represents human insulin growth factor 2 (IGF2) that shows homology to human Zins3.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Conklin DC,

                                                                                                                                                                                                                                                                                           with a specific target substrate comprising administering to the patient a protease with defined specificity for the specific target substrate. The protease hydrolyzes the target substrate and eliminates or reduces one or more biological activities, physico-chemical properties or increases one or more biological activities, physico-chemical properties or pharmacological properties of the target protein and/or activates or or pharmacological properties of the target protein, and/or adds one or more biological activities, physico-chemical properties or more biological activities, physico-chemical properties or pharmacological properties to the target protein. The protease may be administered to treat immune disorders, inflammatory disorders, musculoskeletal diseases, dermatological diseases, gastrointestinal diseases, cardiovascular diseases, metabolic disorder, cancers, hematological diseases, dermatological diseases, defenses.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             for a target substrate for preparing a medicament for the treatment of a specific disease related to the target substrate. The invention also relates to a pharmaceutical or diagnostic composition comprising one or more enzymes in the use cited, optionally comprising pharmaceutically or diagnostically acceptable carriers, excipients and/or auxiliary agents, a method for cleaving a target substrate in vivo or in vitro comprising contacting the target substrate with a protease as cited in the use mentioned, and a method for treatment of a disease in a patient connected mentioned, and a method for treatment of a disease in a patient connected
                                                                                                                                                                                                              genitourinary diseases, gynecological disorders, nutritional disorders and infections. This sequence represents a polypeptide hydrolysed protease used in the scope of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Proteases with defined specificity for a target substrate useful treating a specific disease related to the target substrate, succancer, asthma, diabetes, inflammatory disorders and psoriasis.
